

Download New Drug Combinations Are Helping Women With Early Breast Cancer

Not all women with breast cancer will need chemo, but there are several situations in which chemo may be recommended: Sometimes it is not clear if chemotherapy will be helpful. There are tests available, such as Oncotype DX and MammaPrint, that can help determine which women will most likely benefit. A passion for helping people has long shaped Jennifer O'Neil's career choices. After graduate school at the University of Massachusetts Medical School, she completed post-doctoral research at the Dana Farber Cancer Research Institute in Boston. Accounting about 15% of breast cancer, TNBC is the pathologic type leading to the highest mortality and worst prognosis. • Immunotherapy is another important treatment approach following surgical treatment and other adjuvant therapies. BRCA1 is a breast cancer susceptibility gene that was first identified in 1994. People carrying a mutation (abnormality) in this gene are at an increased risk of breast or ovarian cancer., New Drug Combinations Are Helping Women With Early Breast Cancer.
