Motivation. In signal processing, time–frequency analysis is a body of techniques and methods used for characterizing and manipulating signals whose statistics vary in time, such as transient signals. Bulletin of the American Meteorological Society 63 3. Wavelet analysis This section describes the method of wavelet analysis, includes a discussion of different wavelet func-MathWorks Machine Translation. A wavelet is a wave-like oscillation with an amplitude that begins at zero, increases, and then decreases back to zero. It can typically be visualized as a "brief oscillation" like one recorded by a seismograph or heart monitor., Practical Time-Frequency Analysis.
