

Download Adaptive Management Of Social-ecological Systems

A social-ecological system consists of 'a bio-geo-physical' unit and its associated social actors and institutions. Social-ecological systems are complex and adaptive and delimited by spatial or functional boundaries surrounding particular ecosystems and their context problems. A consistent approach to understand fit is needed to foster the sustainability of social-ecological systems. • A working typology of fit is synthesized from a rapidly expanding literature. Tertiary prevention. All measures available to reduce or limit impairment and disabilities, minimize suffering caused by existing departures from good health and to promote the patient's adjustment to irremediable conditions. Emerging recognition of two fundamental errors underpinning past policies for natural resource issues heralds awareness of the need for a worldwide fundamental change in thinking and in practice of environmental management., Adaptive Management Of Social-ecological Systems.
