Background information for this lab can be found in Chapter 21 in your textbook (Silberberg 5th ed). Purpose This lab activity has two parts. In part 1 you will measure the potential of several voltaic cells and use your results to generate an activity series. Your measured cell potentials ...The concept that voltaic cells consist of two half-cells also suggests that the measured cell voltage is the sum of contributions from both half-cells. In mathematical language:  $E_{\text{total}} = E_{\text{oxidation}} + E_{\text{reduction}}$  (23 -5) In this experiment you will construct several voltaic cells, measure their voltages, and then investigate the effect on cell voltage of changing solution conditions.
